The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #12 from llama (camelid) species

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #14 from Illama (camelld) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; food; human gastric lipase; HGL; cosmetic control; body weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.
                                                                                                                                                                                                   19-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HPL inhibiting VHH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 10-DEC-2001

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #30 from plana (camelid) species
                                                                                                                                                                                                                                                                                                                       Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HPL inhibiting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #15 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid
                                                                                                                                                                                        Llama antibody; camelid; anorectic; heavy chain variable domain; VHH; human dietary enzyme inhibitor; medicament; human pancreatic lipase; food; human gastric lipase; HGL; cosmetic control; body weight.

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the commetic countrol of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #18 from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The artibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #19 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #13 from llama (camelid) species

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for modifying a plant to comproduce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing a CC DNA sequence encoding a heavy chain immunoglobulin, where the DNA is compartment. The method is used for producing a heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain immunoglobulin to a cellular compartment. The method is used for producing a heavy chain inmunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant cor to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than correcting and isolating the product with the plant rather than correcting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEII antibody (denoted Clone46) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag.

The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                                                     Matches 101;

                                                                                                                                                                                                                                                                                                       The patent discloses antibodies or their tragments comprising a weavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #9 from liama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               human

The invention describes a protein array (I) comprising a number of heavy-chain variable domain antibodies or antibody fragments, obtainable from CC camelidae. The method is useful for removing abundant proteins from an CC extract or sample which do not provide useful information on the CC condition of a cell or tissue in the extract or sample to be CC investigated. (I) is useful for detecting the presence of individual CC proteins in a sample, comparing the distribution of proteins in different CC cell types, and identification of proteins that may be of importance in CC determining the altered properties of cells in disease, aging or other CC conditions. Using a heavy-chain variable domain derived from an CC immunoglobulin that is naturally devoid of light chains (VHH) in (I) Provides a number of advantages, such as an improvement of CC sensitivity/resolution in the order of 10-100 times, and describes a method (II) that enables the simultaneous processing of large numbers of CC target antigens in a controlled way. The invention also describes a generates on-line information about the success or failure of a certain panning condition. This feature combined with the microtiter plate format CC allows the complete automation of the technology, based on computer-made decisions on the values of the phage-EIISA for continuation of a limited number of selections. In (II), due to the fact that many different conditions can be tested, varying amounts of input-phages can be used synthetic and immune libraries on large numbers of different target time frames needed for the generation of large panels of antibodies in short time frames needed for the generation of large panels of antibodies in short can be tested, and immune of large panels of antibodies in short time frames needed for the generation of large panels of antibodies in short can be completed and immune panels of large panels of antibodies in short time frames needed for the generation of large panels of antibodies in short and the panels of the panels of anti

resent peptide sequence (camelid) species

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #15 from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5
The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human distary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human distary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #22 from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #4 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 129 AA;
                                                                                                                                                                                                                              Modifying a plant to produce an antibody useful for increasing pathogen resistance or to modulate metabblism comprises introducing a DNA sequence encoding a heavy chain immunoglobulin linked to a peptide that targets a cellular compartment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Potato; heavy chain immunogion metabolism modulator; passive VH; anti-potato SBEII; starch
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18-SEP-2001
  The present invention relates to a method for modifying a plant to produce an antibody or an active fragment or derivative, or a protein functional equivalent, in a cellular compartment comprises introducing DNA sequence encoding a heavy chain immunoglobulin, where the DNA is linked to promoters and provided with an additional sequence encoding a peptide capable of targeting heavy chain immunoglobulin to a cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Solanum tuberosum. Unidentified.

The method is used for producing a heavy chain inmunoglobulin or an active fragment or derivative, or a protein that is functionally equivalent for increasing the pathogen resistance in a plant or to modulate metabolism in a plant. Under some circumstances it may be desirable to retain the antibody product with the plant rather than extracting and isolating the product. In particular, edible selected antigens may be used in a method of passively immunising an animal, preferably human, against the antigen, e.g., pathogenic organisms. The present sequence is an anti-potato SBEII antibody (denoted Clone68) heavy chain variable domain (VH) attached to peptide linkers, myc and his6 tag. The potato SBEII is a starch branching enzyme also designated SBE A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAE10567 standard; peptide; 130

```

Example 4; Page 14; 37pp; English.

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HGL inhibiting VHH fragment, HGL #16 from llama (camelid) species
